Table of Contents

1. Orientation
2. How to execute the program?
3. Basic tasks: solutions and statistics
4. Extended Tasks: Solutions and Statistics
5. Appendix

1. Orientation:

1.1. Objective: the goal of this group work is to solve incomplete sudoku puzzles in SAT-based method. The basic task will apply the minimal-SAT solver.

1.2. Environment:

1.2.1. The optimal operating system is Ubuntu 18.04, with minisat package installation required. And the grader will evaluate project on Ubuntu 18.04.

1.2.2. The sudoku puzzles should be input under a format similar to either of the sample tests given by professor Bruce. ("p096_sudoku.txt" for basic tasks or "top95.txt" for extended tasks). And the undecided spaces in each puzzle will be filled with either ".", "?", "*" or "0".

2. How to execute the program

Since the project will be submitted as a zip file, so we should decompress the file first.

In a nutshell, executing ``python/python3 run_timer.py .txt file`` will initiate both ``sud2sat.py`` and ``sat2sud.py`` and generate outputs and time statistics. For example,

```
lmo@lmo-ubuntu:~/Desktop/Zhaocheng-s/CSC320/project$ python run_timer.py p096_sudoku.txt
```

"Executed command when solving p096_sudoku.txt"

The more detailed information about the execution is given in README.md.

3. Basic tasks: solutions and statistics

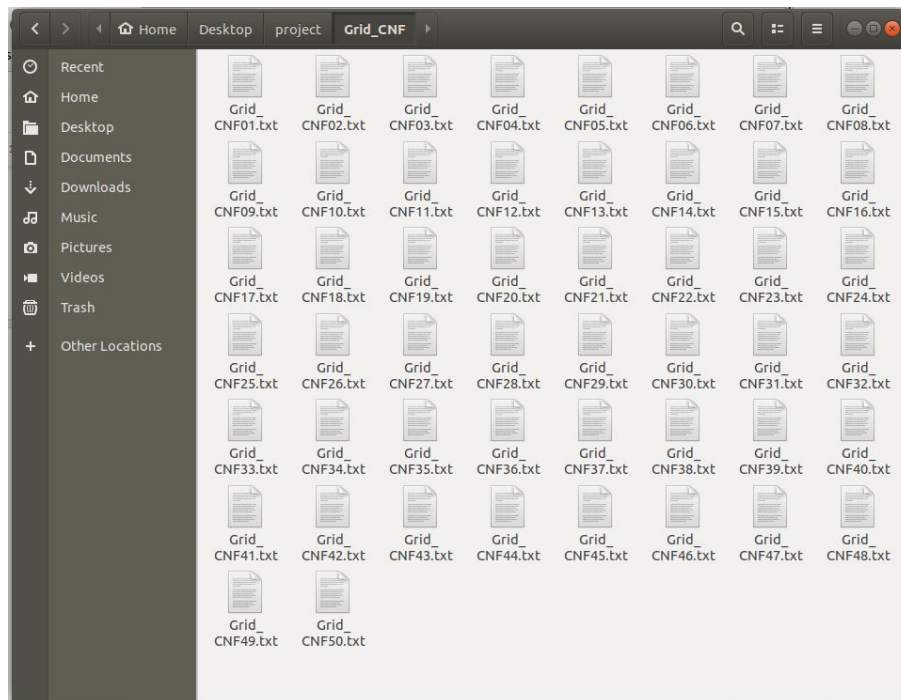

After the execution of `run_timer.py`, the program `sud2sat.py` and `sat2sud.py` will start in order.

With the choice of input puzzle (`p096_sudoku.py` / `top95.txt` / `4x4grid.txt`), `sud2sat.py` will generate a pair of output folders accordingly (`Grid_CNF` & `miniSAT_encoded` / `Grid_CNF_encoded` & `miniSAT_hard_encoded` / `Grid_CNF4x4` & `miniSAT_encoded4x4`).

We will consider the first case only in the basic.

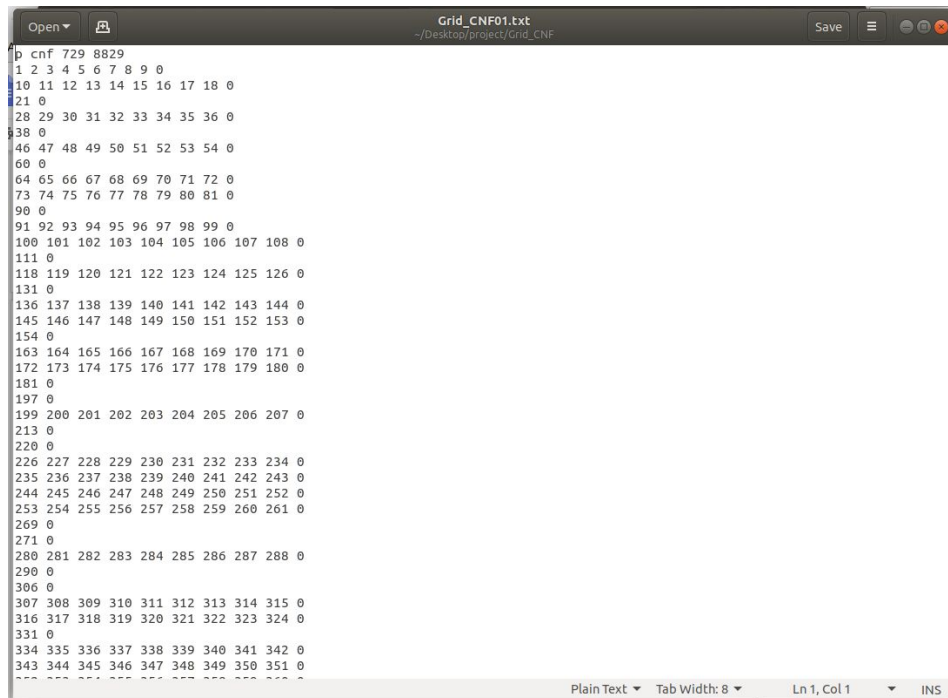

Part 1. Initiation of `sud2sat.py` with `p096_sudoku.txt`:

1.1 Output folder `Grid_CNF` contains the converted miniSAT-suitable, CNF-form file for each puzzle in `p096_sudoku.txt`. For example,

`Grid_CNF`: Folder contents overview

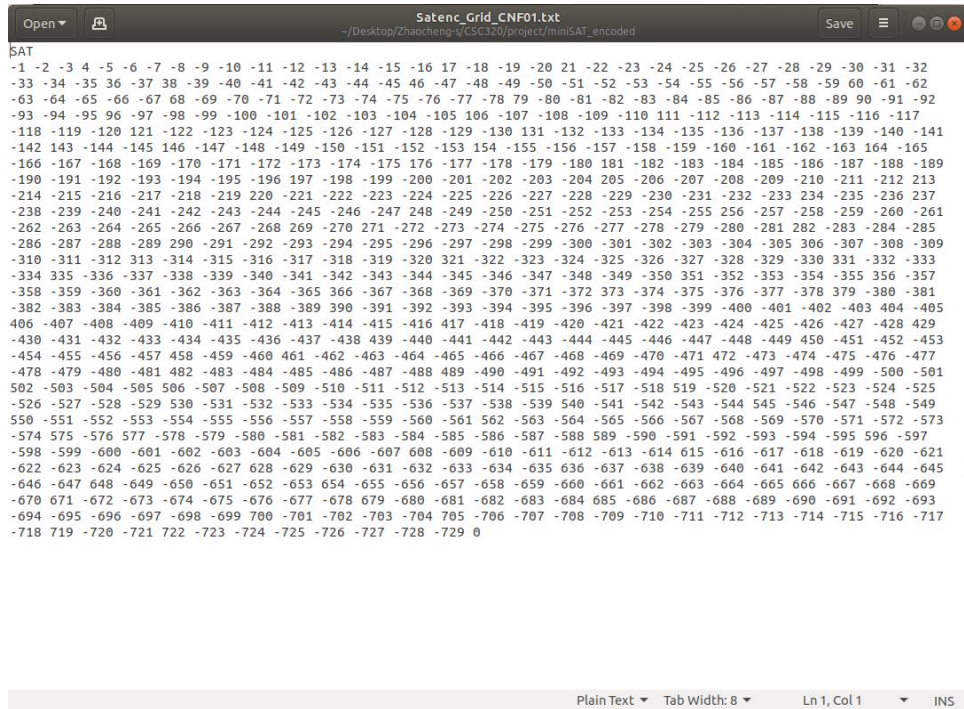

And each file is formatted (partially) as: (example below):

```

'Solutions for puzzle 1-5'

The remaining solutions will be shown in Appendix

3. Extended tasks: solutions and statistics:

3.1. Extended task #1 & #2: Extended encoding to solve puzzles in 'top95.txt'; alternative to minimal encoding.

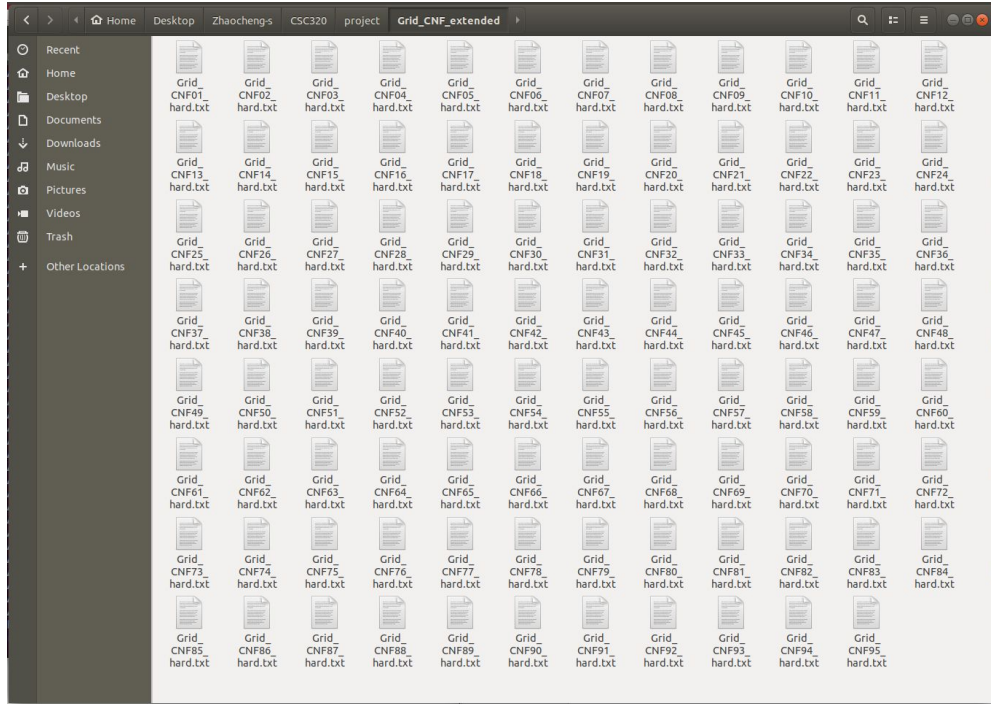

Similarly, after the execution of 'run_timer.py', the program 'sud2sat.py' and 'sat2sud.py' will start in order.

In this case, with the choice of input puzzle 'top95.txt' here, 'sud2sat.py' will generate a pair of output folders 'Grid_CNF_encoded' & 'mini SAT_hard_encoded'.

Notice: For those outputs which are highly similar to the basic tasks, there no need to attach any more detailed photos.

Part 1. Initiation of 'sud2sat.py' with 'top95.txt':

1.1 Output folder 'Grid_CNF_extended' contains the converted miniSAT-suitable, CNF-form file for each puzzle in 'top95.txt'.

'Grid_CNF_extended': Folder contents overview

And each file is formatted (partially), (example below):

```

Open [icon] Grid_CNF01_hard.txt

'miniSAT-encoded file content'

The time statistics for according process is shown below, I will describe more simple:

1. Time statistics of converting puzzles into CNF-form file (01-50):

```
=====sud2sat Statistics=====
Folder exists. Overwrite
Total time of converting puzzles into CNF-form files: 1.328858
number of puzzles: 95
Average time of making each puzzles into CNF-form: 0.013988
```

'Total time for all puzzles / number of puzzles / average time for each'

2. Given the fact that the minisat problem statistics for `top95.txt` are too much, and the formatting is similar to the basic tasks, I will not save them.

3. Time statistics of minisat encoding CNF-form input:

```
minisAT encoding for file Grid_CNF95_hard.txt: 0.000256
Total time of encoding CNF-form by minisAT: 0.023817
number of puzzles: 95
Average time of encoding each CNF-form by minisAT: 0.000251
```

'Total time for all puzzles / number of puzzles / average time for each'

```
Total time of making puzzle input 1 into minisAT encoded form: 0.016125
Total time of making puzzle input 2 into minisAT encoded form: 0.014773
Total time of making puzzle input 3 into minisAT encoded form: 0.014789
Total time of making puzzle input 4 into minisAT encoded form: 0.013932
Total time of making puzzle input 5 into minisAT encoded form: 0.013678
Total time of making puzzle input 6 into minisAT encoded form: 0.013955
Total time of making puzzle input 7 into minisAT encoded form: 0.013651
Total time of making puzzle input 8 into minisAT encoded form: 0.015842
Total time of making puzzle input 9 into minisAT encoded form: 0.015343
Total time of making puzzle input 10 into minisAT encoded form: 0.014960
Total time of making puzzle input 11 into minisAT encoded form: 0.014275
Total time of making puzzle input 12 into minisAT encoded form: 0.013983

```

'total time of making each puzzle into minisat-encoded file part-C'

Part 2. Initiation of `sat2sud.py` with folder `miniSAT_hard_encoded`:
Output folder `Sudoku_hard_solved` contains the solutions for all input puzzles.

The time statistics for according process is shown below, I will describe more simple:

1. Time statistics of converting minisat-encoded files into solutions:

```
The total time of converting encoded puzzles into solutions 0.043841
The number of puzzle processed: 95
The average time for each puzzle: 0.000461
```

'total time of getting solution from minisat-encoded file / number of puzzles / average time for each puzzle'

2. Summary:

2.1. Time statistics for both subprocesses in order to get solutions.

```
THE TOTAL TIME OF SOLVING ALL PUZZLE:1.396516
the number of puzzles: 95
The average time of solving each puzzle: 0.014700
```

'total time for both sud2sat.py and sat2sud.py processes'

2.2. Solutions for 'top95.txt' will be shown in appendix

Grid 1 solved	Grid 2 solved	Grid 3 solved	Grid 4 solved	Grid 5 solved
417369825	527316489	617459823	487312695	962314857

164875293	238769145	465912738	642953718	416728395

'Solution of puzzle 01-05 in 'top95.txt'

2.3. There is no additional program for the extended tasks, you can all work on 'run_timer.py'. 'sud2sat.py' and 'sat2sud.py' are also designed to the extended encoding.

3.2. Extended task #3: Exploring nxn puzzles:

'run_timer.py', 'sud2sat.py' and 'sat2sud.py' are designed to handle puzzles of any length, with the premise of required formatting. In order to test such flexibility. We create a '4x4grid.txt' file to contain a 4 by 4 sudoku puzzle to solve.

After going through the same procedures as precious two text inputs, the solution is:

'4x4 puzzle solution'

5. Appendix:

A. Full solutions of `p096.sudoku.txt`:
